

Measures	Formula	Description
Learning	$\frac{(trial\ 1 + trial\ 2 + trial\ 3)}{3}$	Average correct recall across three learning trials.
Learning gain	$trial\ 3 - trial\ 1$	Change in performance from the 1st to the 3rd learning trials. A positive score indicates increase in performance.
Delayed recall	<i>Delayed recall</i>	Correct recall after a delay.
Forgetting	$Delayed\ recall - trial\ 3$	Amount of information lost after a delay. A negative score indicates loss after a delay.
Recognition	<i>Correctly recognised - Familiar and New errors</i>	Amount of information correctly recognised, minus the errors.

Composite scores	Description
General memory	Average learning, delayed recall and recognition, across all five subtests
General learning/recall	Average learning and delayed recall, across all five subtests
General recognition	Average recognition across all five subtests

Composite scores	Description
Verbal	Average performance between Written Words and Pseudowords subtests
Non-verbal	Average performance between Objects and Designs subtests
Semantic	Average performance between Written Words and Objects subtests
Non-semantic	Average performance between Designs and Pseudowords subtests
